Promote Products

This Power BI artefact imports BakeOps Wave 3 CSV outputs and models product performance using a simple star-scheme pattern. The dashboard surfaces a rank-inversion insight where cake 233 is the top revenue product but ranks weakest by adjusted margin, creating a review signal. It also identifies cake 236 as a lower-revenue product with the strongest margin creating a promote signal.

The artefact demonstrates CSV-based Power BI modelling, DAX measures, rank comparison, and business-facing dashboard design. The evidence is limited to the exported Sprint 61 snapshot and should not be presented as forecasting or production automation.

Cake	Revenue Rank	Margin Rank	Margin Rank Gap	Action
233	1	4	3	review
234	3	3	0	stable
235	2	2	0	stable
236	4	1	-3	promote
